

## Maintech IT Support Solutions with a Focus on Security

Cranford, NJ – Tuesday, April 16, 2019

Maintech, Incorporated, a global leader in IT Infrastructure Services, provides multi-platform Hardware Maintenance services to the Enterprise-Data Center market and a full suite of IT Infrastructure Managed Services to the Small/Mid-size Business (SMB) market today announced programs that focus on Security in its IT offices and in its delivery to customers.

Security and Cybersecurity are hot topics across the world in every industry. Reviewing IT processes, securing networks, hardening systems, and protecting data from threats has become more important than ever. As noted in a 2019 report from the Center for Internet Security (CIS), IT security breaches are on the rise. In particular, as enterprise and mid-market organizations move some functional areas to the cloud, the lines can be blurred for ensuring responsibility for security and data integrity.

“Customers expect their IT service organization to have experience and depth of resource in hardware systems support. Increasingly, they also expect an awareness of cybersecurity frameworks and compliance with end-user IP protection protocols as it relates to their IT Infrastructure” stated Frank D’Alessio, President at Maintech.

Maintech is known for its world-wide data center support and enterprise-wide infrastructure managed services competencies, providing expert server-storage-network support in the US & 48 countries, as well as IT Infrastructure Managed Services solutions to some of the most respected customer brands. Maintech was named as a “Pure Play” Third Party Support Maintainer in Gartner Group recent report - a Market Guide for Data Center Maintenance. Gartner notes that many VAR/SI have developed TPM support partnerships in recent years to create “hybrid” solution to better serve customer support needs. <https://www.gartner.com/doc/3778884?ref=SiteSearch&stkw=tenneson&fml=search&srcId=1>

“Our mission is to resolve IT Infrastructure service issues effectively and being effective includes understanding and complying with a broad scope of security issues. Maintech is ISO compliant on multiple levels. The tools we use to support our clients follow Secure Control Frameworks (SCF) and NIST CSF (Cybersecurity Framework) recommendations. Wrapped around our service delivery is a platform of business governance grounded in ITIL compliance and Sarbanes Oxley controls” stated D’Alessio.

Maintech continues to invest in its service delivery infrastructure as enterprise and mid-market level customers look for expert professional service solutions with global coverage, a longer life from their existing IT infrastructure, and a focus on security.
