

MAINTECH VULNERABILITY

Maintech Vulnerability is our integrated vulnerability management tool, built to present and action cybersecurity intelligence at a board-ready level.

From initial discovery through to verified remediation, we show you exactly what you're exposed to, what's being actively exploited, and how quickly your teams are responding.

Real-Time Exposure Insight

Prioritized by Verified Exploit Activity

Fully Evidenced Response Performance

Governed Visibility of Accepted Risk

MAINTECH

Intelligent Threat Management.

Every vulnerability ranked, every response measured,
one clear position.

Live Exposure Tracking

Real-time view of your vulnerability posture as new threats emerge and remediation progresses.

Exploitability Intelligence

Vulnerability categorized by real-world threat activity, with remediation following evidence over volume.

SLA-Based Remediation Tracking

Response performance measured by severity, adjustable to your risk tolerance.

Software Exception Management

Visibility of any accepted risk across your environment, documented and quantified.

Trend Over Time

Track vulnerability and remediation trends over time, with historical data that isn't available natively within Microsoft Defender.

Security Trend Tracking

See how your overall vulnerability posture changes over time and identify improvements or areas that need attention.

SLA Performance Tracking

Measure remediation against agreed targets, such as resolving 90% of critical vulnerabilities within seven days, and see how consistently those goals are being met.

Why Maintech Vulnerability?

Maintech gives you a clearer view of vulnerability risk, remediation progress, and security trends over time. Prioritize the right issues, track performance against SLAs, and see where improvement is needed.
